Sheet Metal Working, Joining and Coating Fair

22nd-24th April 2009
Krakow

Targi
w Krakowie

BLACH-TECH-EXPO

Fairs are the best place for promoting a company, its brands and latest releases. This is where the manufacturer meets the user and the scientist meets the practitioner. Fairs are a great tool for communication and marketing, the place for business contacts that stimulate economic development in every field. One of these fields is the sheet metal market, which has been developing exceptionally well in Poland: it is counted among the most robust in the world and has a leading role in Central-Eastern Europe.

Therefore, we invite you to participate in the technological Sheet Metal Working, Joining and Coating Fair – BLACH-TECH-EXPO, organized in Krakow in 22nd – 24th April 2009. As an experienced fairs organizer in Poland we know that, apart from the opportunity to view the exhibits, it is also important for exhibitors and visitors to learn about the latest trends in the industry and exchange experiences. Therefore it is only natural that the fairs are accompanied by a forum concerning the trends in research and development and the application of new, innovative solutions in the working, joining and coating of sheet metal as well as work safety and environment protection.

BLACH-TECH-EXPO fair complement the renowned technological Machine Tools and Material Processing Equipment Fair EUROTOOL, which have been running for the last fourteen years and have enjoyed a lot of interest. We will use the experience and achievements gained during the organization of the fast developing EUROTOOL Fair for the organization of BLACH-TECH-EXPO.

We promote BLACH-TECH-EXPO fair among specialists all over Poland and abroad via magazines, radio, TV, internet portals, vocational associations, self-governments and a dozen or so individual invitations. The visitor pre-registration system will help them prepare for their visit to the fairs and will let you orientate yourself earlier in the interests and needs of customers.

We invite exhibitors and visitors to participate in BLACH-TECH-EXPO Fair and we are convinced that this participation will be the right decision. Fairs are the shape of the future and you will make good business in Krakow.

SHEET METAL working

thematic scope

- stamping
- cutting and blanking
- straightening, bending and coiling
- pulling
- drawing, re-drawing, fullering
- spinning
- roll forming
- special, unusual processes (methods) of sheet metal working
- software for stimulating processes of sheet metal working
- software for designing products and technologies for their manufacturing
- tools, equipment and software for machine tools, machines and facilities for forming sheet metal products
- manufacturing shapers (profiles) and sheet metal pipes
- flexible systems, especially for the stamping, cutting and bending of sheet metal
- technologies and facilities for cleaning and working of sheet metal surfaces and products
- facilities and tools for controlling the precision and quality of working
- facilities for the storage and internal transport of sheet metal and its products
- equipment at sheet metal working workshops
- renovation and modernization of production means
- technologies of assembling and disassembling sheet metal constructions
- work safety and environment protection in sheet metal working
- research, advisory and training services
- sheet metal working services, co-operation

SHEET METAL joining

thematic scope

- welding
- pressure welding
- gluing
- soldering
- riveting
- screw connections
- cold redrawing
- controlling the quality of connections
- work safety and environment protection
- research, advisory and training services
- metal sheets joining services, co-operation

METAL SHEETS coating

thematic scope

- protective coating (including anti-corrosion)
- decorative and decorative-protective coating
- engineering coating – functional
- cleaning and preliminary machining of surfaces before coating
- coating technologies
- controlling the efficiency and durability of coating technologies
- work safety and environment protection
- testing the environmental impact on corrosion processes – selection of protection means
- research, advisory and training services
- coating services, co-operation

TYPES OF SHEET METALS exhibited

- steel metal sheets
- non-ferrous metal sheets
- perforated metal sheets
- laminar metal sheets
